Career Objective

A highly motivated Computer Science and Engineering student with a strong foundation in Artificial Intelligence, Machine Learning, and Generative AI. Seeking to leverage hands-on experience in developing AI-powered applications, including projects with Large Language Models (LLMs) and computer vision, to contribute to innovative and challenging software development projects.

EDUCATION

Lovely Professional University <i>Bachelor of Technology - Computer Science and Engineering, CGPA - 7.5</i>	Punjab, India <i>September 2022 - Present</i>
Mohta Public School (CBSE) <i>Senior Secondary</i>	Rajgarh, Churu <i>April 2020 - March 2021</i>
Mohta Public School (CBSE) <i>Secondary</i>	Rajgarh, Churu <i>April 2018 - March 2019</i>

Training

Java Full Stack training by Cipher School (2 months)	Feb 2025
Outcomes:	
- Developed proficiency in front-end web development by building responsive and interactive user interfaces using HTML, CSS, and JavaScript. - Gained expertise in creating robust, scalable backend services and RESTful APIs with Core Java and the Spring Boot framework. - Mastered database connectivity and management by using JDBC to integrate Java applications with MySQL databases. - Acquired hands-on experience in building dynamic, end-to-end web applications by integrating front-end and back-end components using JavaServer Pages (JSP).	

PROJECTS

LogiVoice: Smart Logistics Doc & Voice Assistant	Jun 2025
- Developed a full-stack web application leveraging AI-powered automation to streamline logistics document workflows, significantly reducing manual effort. - Implemented multimodal AI capabilities through voice command processing, real-time translation, and document intelligence for PDF extraction, automatic document type detection, and barcode/QR code recognition. - Designed a user-centric, mobile-friendly dashboard that enabled bulk PDF uploads and incorporated advanced features like annotation tools and searchable/exportable data tables. - Utilized Natural Language Processing (NLP) and integrated OCR (Tesseract), Google Translate, and speech recognition to facilitate robust multilingual and multimodal input/output. - Engineered a persistent command and data history with efficient memory management, enhancing system usability and data integrity. - Built with Python (Flask), JavaScript, Bootstrap, and modern Ai libraries, delivering a high impact solution for logistics automation. - GitHub link: https://github.com/Kanhaiya1610/LogiVoice	
Stock Price Predictor:	May 2025
- Integrated Google's Gemini Large Language Model (LLM) into a Flask-based stock analysis simulator, enhancing traditional technical indicators (RSI, MACD, OBV, etc.) with generative AI capabilities. - Engineered the core AI feature to produce real-time, narrative-style "Analyst Commentary" by interpreting complex quantitative signals and translating them into human-readable insights. - Developed a fully responsive and interactive frontend using HTML, CSS, and JavaScript, featuring dynamic signal gauges for visualizing momentum and displaying the AI-generated analysis. - Implemented advanced user controls, including customizable weighting for all indicators, strategy presets for different analysis	

styles, and a feature to export session data as a JSON file.

• **Anime Face Style Image Generator Model:**

Mar 2025

- Engineered a hybrid VAE-GAN model to generate novel, high-fidelity anime-style facial images, combining the stable training of a Variational Autoencoder with the sharp image generation capabilities of a Generative Adversarial Network.
- Constructed an end-to-end deep learning pipeline, automating dataset acquisition and image preprocessing (resizing, normalization) to ensure standardized inputs for the model.
- Successfully trained the generative model, establishing a foundational and scalable framework for future development in synthetic media generation.
- Tech: Python, Variational Auto Encoder, Generative Adversarial Network, Vision Transformers, Collab, GitHub

Project link :[Drive Link to Project](#)

• **Finance Ai Assistant:**

Feb 2025

- Architected a comprehensive financial management application using Python and Streamlit, featuring real-time stock market data visualization via the Trading View API.
- Engineered a suite of intelligent tools for dynamic budget tracking, expense analysis, and automated bill management to provide users with actionable savings insights.
- Constructed a secure, multi-user backend on Firebase, leveraging Firestore for encrypted data storage and Firebase Authentication for robust user management.
- Elevated the user experience with interactive dashboards and voice command functionality, delivering personalized financial reports to empower informed decision-making.
- Tech: Python, Streamlit, Firebase, Trading View API, NLTK, Plotly, GitHub

• **GitHub:** <https://github.com/Kanhaiya1610/Finance-Ai-Assistant>

• **Space Weather Alert System:**

Jan 2025

- Built a high-performance, reactive RESTful API with Java, Spring Boot, and WebFlux to process and disseminate time-sensitive space weather data.
- Integrated multiple external REST APIs (e.g., NASA) for data aggregation and implemented a persistence strategy using Spring Data JPA with an H2 in-memory database.
- Established a scalable backend architecture with clearly defined data models, service layers for business logic, and repositories for data access.
- Improved developer productivity and code readability by employing Project Lombok to automate the generation of boilerplate code like getters, setters, and constructors.
- Tech: Java, Spring Boot, JPA, H2 Database, Lombok, REST API, GitHub

• **GitHub:** <https://github.com/Kanhaiya1610/Space-Weather-WebApp>

SKILLS

- Languages:** Java, Python, SQL, NoSQL
- Frameworks:** HTML and CSS, Spring Boot, Shell Scripting, Git, JSP, JDBC, Machine Learning, Natural Language Processing, Deep Learning, Computer Vision, Large Language Models (LLMs), GenAI, Data Structures, Algorithms, OS, Networking, AI/ML
- Tools/Platforms:** MySQL, PostgreSQL, MongoDB, Linux, GitHub, MongoDB Compass, Eclipse, MS Office, Power BI
- Soft Skills:** Problem Solving Skills, Team Player, Project Management, Adaptability, Multi-Tasking

CERTIFICATES

- Complete Machine Learning & Data Science Program July 2024
- Oracle Cloud Infrastructure 2023 AI Certified Foundations Associate Jun 2024
- Attended Workshop on Containers and AI/ML on AWS Cloud by AWS at IIT Roorkee Mar 2024

ACHIEVEMENTS

- Reached Semi-finals in a state-level football tournament hosted by a private club Jaipur, 2024
- Won Finals in a district-level football tournament hosted by a private club Churu, 2019

Languages

- Japanese: Conversation Level Proficiency, N4 Equivalent (Reading, Speaking, Writing)
- Arabic: Elementary Level Proficiency (Reading)
